The shape of things to come

neoss® | Esthetic Healing Abutments with ScanPeg

Intelligent Simplicity
A complete range of anatomically-shaped PEEK healing abutments with a dedicated ScanPeg, for simplified and accurate intra-oral scanning.

Easier handling – a faster, improved procedure
- Minimized component exchange
- Streamlined intra-oral scanning
- Less chair time, fewer treatment steps

Undisturbed healing and more patient-friendly
- Biological seal is maintained, tissue level is preserved
- Less invasive for increased patient comfort

Anatomically-shaped to create excellent esthetics
- Shapes soft tissue during healing
- Perfectly matched with Neoss Esthetiline final abutments and Neoss customized abutments

A smarter, more efficient process for you

A more comfortable experience for your patients
This new range of Esthetic Healing Abutments with intra-oral scanning capabilities is yet another example of our unique ‘Intelligent Simplicity’ in action. Innovative and effective solutions which put you and your patient first.

A step ahead

01 Healing abutment placement
The Esthetic Healing Abutment is placed during first or second stage surgery and then left until the final abutment is placed.

02 ScanPeg placement and scanning
An accurate intra-oral scan is carried out at healing abutment level utilizing the ScanPeg. The ScanPeg comes co-packed with the Esthetic Healing Abutment and is easy to both attach and remove. The intra-oral digital impression can be taken whenever you choose, using your existing scanner.

03 Placement of the final restoration
Flexibility in when you take the digital impression allows design work to continue during the healing phase. The healing abutment is not removed until the final restoration is placed, eliminating one complete surgical intervention.
